

## **General Sidekick Question**

### **How do I set up Sidekick so that the program can be accessed remotely over the internet?**

The directions for logging in to remote locations is complicated unless you are familiar with routers and firewalls. The directions are listed in your user manual which you can access from Help on the menu bar in your software.

If you need help, you can go to our order page and purchase "Remote Access Setup" and we can have a technician call you and set it up for you.
